

Content Filtering For Mobile Devices

MobiFilter was created to fill the need for content filtering on mobile devices. It redirects all web traffic through our customized, highly scalable filtering servers. Mobifilter is sold as a service with monthly or yearly pricing available and is licensed on a per device basis.

Mobifilter is available with either of the following filtering systems depending on the phone platform.

- ♦ Whitelist—Provides the most secure browsing experience. However, you will run into sites that contain no improper content but have not been reviewed.
- ♦ Content Filtering / Whitelist / Blacklist—Provides a relatively secure browsing experience. We have a large list of blocked sites. If a site is not blocked immediately we run it through our content scanner in search of improper material.
